

VBSShield for **MS Office 2000/XP**

Secure e-mailing and documents

Protection

Our solutions provide protection for your systems and essential data.

Reliability

Our highly qualified and experienced professionals ensure the reliability of our solutions.

Security

Multi-level protection and value-added services – the cornerstones of ultimate security.

A threatening danger in offices

Our everyday office work is supported by Microsoft Office applications to a large extent, providing help with macros which enable automation. These products work in the background and can contain harmful programs, which can cause serious problems if activated.

E-mails the primary source of danger

Every user using e-mail is at risk as most viruses spread by using the limitless opportunities provided by electronic mailing: enormous speed and numerous users in your contact list to infect. A mass-mailing virus can spread itself in hours sending out thousands of e-mails to others. Without the proper protection you may not even notice you have been infected and you are sending infected mail.

Outlook e-mail protection

Intelligent management of infected e-mails

The program does not allow the user to open infected e-mails and moves infected files to the quarantine.

Constant protection

Working in the background, the resident protection continuously scans incoming and outgoing e-mails and their attachments including compressed files.

Improved notification system

The system notifies the infected e-mail's sender and recipient and places an entry in the program's central log.

Office document protection

Constant protection

The program provides constant protection for Office applications.

Automatic scanning

Every document is scanned before it is opened to avoid the activation of macro viruses.

Full integration

The protection is fully integrated into Office applications to provide reliable and perfect security.

SYSTEM REQUIREMENTS

- Windows 95/98/Me/NT 4.0/2000/XP
- MS Outlook 97 SR-2/98/ 2000/XP
- MS Office 2000 SR-1/XP
- Pentium processor or equivalent
- 32 MB memory (64 MB recommended)
- 5 MB free hard disk space.

Two defense modules

VBSHield for MS Office integrates itself into your office applications, protecting you from possible infections. The two defense modules are Outlook mail protection and macro protection integrated into Office 2000 / XP applications (Word, Excel, Powerpoint, Access).

Outlook mail protection

The software's most important component scans mail traffic (every e-mail and all their attachments) on the user's computer for any possible viruses. This means that no information you forward or receive electronically will endanger either you or your partners.

Office 2000 / XP application protection

The first line of document protection is the effective defense of office applications. VBSHield for MS Office's integrated application protection scans every macro in Microsoft Office 2000 / XP applications (Word, Excel, Powerpoint, Access) before they are opened.

Full integration with the workstation's defense module

VBSHield for MS Office is fully integrated among VirusBuster for Windows Workstation's components. Therefore it uses their valuable functions: the intelligent quarantine, automatic updates, central logging and alerts.

High performance scan engine

VirusBuster products are based on the award-winning VirusBuster virus scan engine. The scan engine's high performance and virus recognition ability qualified by independent tests ensure fast and effective virus detection. Manual and scheduled scans are both available in the application. The latter enables you to scan your computer automatically from time to time to make sure it is free from viruses.

Automatic updates

An effective anti-virus software must always be up-to-date, which can be achieved by updating the software itself and the virus database. You can update your software manually at any time or you can set automatic updates. This is needed for your licensed anti-virus software to be able to provide you with the highest level of security. Updates can be performed from either a CD, the Internet or a network path.

Full support

VirusBuster products are backed up by a high quality, full scale technical support. Our value-added services provide you with effective help in creating and maintaining your security system or even in solving critical situations.
